# Safety requirements

Warning: Only connect voltage within the specified range. If the voltage exceeds the specified range, it may cause equipment damage and even affect personal safety. The voltage range that can be connected to each port is detailed in the product specification section.

Warning: Do not attempt to operate the device in any other way not mentioned in this document. Incorrect operation of equipment may pose a danger. When the equipment is damaged, the internal security protection mechanism will also be affected.

Warning: Do not attempt to replace device components or modify the device using other methods not mentioned in this document. Do not repair the product yourself when it malfunctions.

Warning: Do not use the equipment in environments where explosions may occur or in the presence of flammable smoke. If necessary for such environments, please place the device in a suitable enclosure.

Warning: During the operation of the warning device, all chassis covers and filling panels must be closed.

Warning: For equipment with exhaust vents, do not insert foreign objects into the vents or block the air flow through the vents.

## **Measurement category**

Warning: This device can only be used in measurement category I (CAT I). Do not use this device to connect signals or perform measurements in measurement categories II/III/IV.

## Measurement category description

Measurement Category I (CAT I) refers to measurements taken on circuits that are not directly connected to the main power supply. For example, measuring circuits that are not derived from the main power source, especially circuits derived from protected (internal) main power sources. In the latter case, the instantaneous stress will change. Therefore, users should understand the instantaneous tolerance of the device.

Measurement Category II (CAT II) refers to measurements taken on circuits directly connected to low-voltage equipment. For example, measuring household appliances, portable tools, and similar devices.

Measurement Category III (CAT III) refers to measurements conducted in building equipment. For example, measurements are taken on distribution boards, circuit breakers, circuits (including cables, busbars, junction boxes, switches, sockets) in fixed equipment, as well as industrial equipment and certain other devices (such as fixed motors permanently connected to fixed installations).

Measurement category IV (CAT IV) refers to measurements taken at the source of low-voltage equipment. For example, measurements taken on electricity meters, primary over Current protection equipment, and pulse control units.

## **Environment**

| Temperature      |                              |
|------------------|------------------------------|
| Operation        | 0°C~55°C                     |
| Storage          | -40°C~85°C                   |
| Humidity         |                              |
| Operation        | 5% RH~95% RH, non-condensing |
| Storage          | 5% RH~95% RH, non-condensing |
| Pollution level  | 2                            |
| Highest altitude | 2000m                        |

## **Pollution level description**

Pollution level 1: No pollution, or only dry non-conductive pollution occurs. This pollution level has no impact. For example, a clean room or an air-conditioned office environment.

Pollution level 2: Generally only dry non-conductive pollution occurs. Sometimes temporary conduction may occur due to condensation. For example: general indoor environment.

Pollution level 3: Conductive pollution occurs, or dry non-conductive pollution becomes conductive due to condensation. For example, an outdoor environment with a canopy.

Pollution Level 4: Permanent conductive pollution caused by conductive dust, rainwater, or snow. For example: outdoor places.

## Recycling precautions

Warning: Some substances contained in this product may be harmful to the environment or human health. To avoid releasing harmful substances into the environment or endangering human health, it is recommended to recycle this product using appropriate methods to ensure that most materials can be reused or recycled correctly. For information on handling or recycling, please contact local professional organizations.

## 1. Product Introduction

## 1.1. Overview

M3000 Wiring Definition

#### Overview

The M3000 series remote I/O module is a set of computer interface modules based on the Modbus RTU standard protocol. The M3000 have RS485 interface, which is remotely controlled through the standard Modbus RTU protocol, with programmable analog output interfaces for multiple channels, and can be converted through programmable control.

## Feature point

- 2/4/8-channel analog output
- Analog output resolution rate 12-bit
- Using standard Modbus RTU protocol
- Built-in Watchdog Timer will automatically reset the module in case of system failure
- 0-5V, 0-10V Voltage output
- 0-20mA, 4-20mA Current output
- 9-24V power supply voltage range
- DIN-Rail Mounting and Piggyback Stack

## **Applications**

- Remote data acquisition
- Process monitoring
- Industrial process control
- Energy management
- Monitor
- Safety system
- Laboratory automation
- Building automation
- Product testing

# 2. Product specifications

## **Common Specifications**

| Connection       |   |  |  |  |
|------------------|---|--|--|--|
| Interface        | RS-485 (2-Wire)                                       |  |  |  |
| Baud rate (bps)  | 1200,2400,4800,9600(Default),19200,38400,57600,115200 |  |  |  |
| Checksum         | NONE, ODD, EVEN(Default)                              |  |  |  |
| Stop bits        | 1(Default), 2   |  |  |  |
| Protocol         | Modbus RTU  |  |  |  |
| Watchdog Timer   | 0.1seconds to 40 seconds                              |  |  |  |
| Power Supply     |   |  |  |  |
| Input Voltage    | 9-30 VDC  |  |  |  |
| Electric Current | M3002: 90mA (Max) @ 24V                               |  |  |  |
|                  | M3004: 95mA (Max) @ 24V                               |  |  |  |
|                  | M3008: 100mA (Max) @ 24V                              |  |  |  |
|                  | M3012: 110mA (Max) @ 24V                              |  |  |  |
|                  | M3014: 220mA (Max) @ 24V                              |  |  |  |
|                  | M3018: 350mA (Max) @ 24V                              |  |  |  |

## **M300x Product Specification**

| Wisoba Froduct Specification |                  |  |  |
|------------------------------|------------------|--|--|
| Analog output                |                  |  |  |
| Channels                     | M3002: 2         |  |  |
|                              | M3004: 4         |  |  |
|                              | M3008: 8         |  |  |
| Output type                  | Voltage          |  |  |
| Resolution                   | 12-bit           |  |  |
| Voltage range                | 0-5VDC, 0-10VDC  |  |  |
| Accuracy                     | 0-5V: 0.1%+10mV  |  |  |
|                              | 0-10V: 0.1%+20mV |  |  |
| Output impedance             | <1Ω              |  |  |
| Temperature coefficient      | 25ppm/°C         |  |  |
| Isolation voltage            | 1500V            |  |  |

### **M301x Product Specification**

| Moora i routet Specification |                |  |  |
|------------------------------|----------------|--|--|
| Analog output                |                |  |  |
| Channels                     | M3012: 2       |  |  |
|                              | M3014: 4       |  |  |
|                              | M3018: 8       |  |  |
| Output type                  | Current        |  |  |
| Resolution                   | 12-bit         |  |  |
| Voltage range                | 0-20mA, 4-20mA |  |  |
| Accuracy                     | 0.1%+ 40uA     |  |  |
| Output impedance             | < 25Ω          |  |  |
| Temperature coefficient      | 25ppm/°C       |  |  |
| Isolation voltage            | 1500V          |  |  |

# 3. Product unpacking and packing list

## **3.1.** Product unboxing

To prevent equipment damage from electrostatic discharge (ESD), please note the following:

- Please wear a grounded wristband or touch a grounded object first to ensure that the human body is grounded.
- Before removing the equipment from the packaging, please first place the anti-static packaging in contact with a grounded object.
- Do not touch the exposed pins of the connector.
- Please place the device inside an anti-static rod when not in use.

If the product is damaged after unpacking, please contact us promptly.

## 3.2. Packing list

| Name                | <b>Specification Description</b> | Quantity |
|---------------------|----------------------------------|----------|
| M3000               | M3000 Remote I/O Module          | 1        |
| Include Attachments |                                  |          |
| Wiring terminals    | 13 Pin/Green/3.81                | 2        |

# 4. Installation and simple testing

## 4.1. Hardware install

Before installation and debugging, the following equipment needs to be prepared:

- M3000 Remote I/O Module
- A Windows series computer with RS-485 interface
- A DC Power Supply (9-24V)
- A USB to RS-485 converter, such as SDS1001(if the computer does not have an RS-485 interface)

Connect the power supply and RS-485 cable according to the instruction in the following diagram. When selecting power cables, due to the limitation of DC voltage drop, using thicker wires would be more suitable. In addition, long wires can also cause interference to communication lines. It is best to use shielded twisted pair cables that comply with EIA RS-485 when selecting RS-485 cables to reduce interference.

## **4.2.** Software installation

We provide an application for configuring, detecting, and easy-to-use M3000 series remote I/O modules, which can only be installed on the Windows desktop operating system. Double click to run setup. exe for installation.

Software installation diagram

## **4.3.** Simple testing

The M3000 series remote I/O module is set to its initial value before leaving the factory, as shown in the table below. If the settings of the M3000 series remote I/O module have been modified and the settings have been forgotten, a wire can be used to connect the Initiate and GND terminals, and then the power of the M3000 can be turned on. The LED indicator of the M3000 will flash three times at a frequency of 1Hz, and then disconnect the connection between the Initiate and GND. At this time, the M3000 remote I/O module will be restored to its factory default values.

Table 1 Default Value List

| Tuble 1 Deluait Value Elst |               |  |  |
|----------------------------|---------------|--|--|
| Parameter                  | Default value |  |  |
| 485 Address                | 0x01          |  |  |
| Baud rate                  | 9600          |  |  |
| Checksum                   | EVEN          |  |  |
| Stop bit                   | 1             |  |  |

Run the M Console configuration software, in the figure below. Please refer to the "M Console Quick Use Guide" for software operations.

M series DAQ setting software

# 5. Analog output

In the M3000 series remote I/O module, the M3000 is equipped with multiple analog output channels.

Schematic diagram of signal analog output connection

# **6.** Programming instructions

The M3000 series remote I/O module is a set of computer interface modules based on Modbus RTU, and its programming rules follow The relevant conventions of Modbus RTU protocol.

For the convenience of different application scenarios, the M3000 series remote IO module is equipped with two versions of MODBUS address schemes, namely V1.0 and V2.0. The V1.0 version is a non offset address scheme, while V2.0 is an offset address scheme. Since the release of this manual, V2.0 is the default setting. If necessary, the version can be switched through the M Console software.

Comparison table between coil/register address and Modbus message address.

| Coil/Register Address | V1.0 Modbus Message Address | V2.0 Modbus Message Address |
|-----------------------|-----------------------------|-----------------------------|
| 1~9999                | 1~9999, 0x000~0x270F        | 0~9998, 0x0000~0x270E       |
| 10001~19999           | 10001~19999, 0x2711~0x4E1F  | 0~9998, 0x0000~0x270E       |
| 30001~39999           | 30001~39999, 0x7531~0x9C3F  | 0~9998, 0x0000~0x270E       |
| 40001~49999           | 40001~49999,0x9C41~0xC34F   | 0~9998, 0x0000~0x270E       |

## **MODBUS RTU Command Message Description**

For the convenience of users who are using the Modbus RTU protocol for the first time, here are several commonly used Modbus command messages as examples. If you are already familiar with the Modbus RTU protocol, you can directly view the following mapping table.

#### **01** Function code

Used to read the status of the coil (DO)

To read the status of 8 coils starting from address 1 of a module, the host sends the following command:

| Module address | Function code | Coil address | Read the number of coils | CRC verification |
|----------------|---------------|--------------|--------------------------|------------------|
| 0x01           | 0x01          | 0x0000       | 0x0008                   | 2-byte CRC check |

#### The module **returns** the following data:

| Module address | Function code | Byte count | data | CRC verification |
|----------------|---------------|------------|------|------------------|
| 0x01           | 0x01          | 0x01       | 0x05 | 2-byte CRC check |

The state of each coil corresponds to one bit of data, and 8 coils correspond exactly to one byte of data. If 9-16 coils of data are read at a time, the byte count is 2, and so on. The binary representation of data 0x05 is 0000 0101, indicating that DO0 and DO2 states are 1, and the remaining DO states are 0.

#### **02** Function code

Used to read discrete quantity (DI) states

To read the 8 discrete states of a module starting from address 10001, the host sends the following command:

| Module address | Function code |        | Read the quantity of discrete quantities | CRC verification |
|----------------|---------------|--------|--|------------------|
| 0x01           | 0x02          | 0x0000 | 0x0008                                   | 2-byte CRC check |

#### The module **returns** the following data:

| Module address | Function code | Byte count | data | CRC verification |
|----------------|---------------|------------|------|------------------|
| 0x01           | 0x02          | 0x01       | 0x05 | 2-byte CRC check |

Each discrete state corresponds to one bit of data, and 8 coils correspond to exactly 1 byte of data. If 9-16 coils of data are read at a time, the number of bytes is 2, and so on. The binary representation of data 0x05 is 0000 0101, indicating that DI0 and DI2 are in the 1 state, and the remaining DO states are in the 0 state.

#### **03** Function code

Used for reading and holding registers

To read the status of three registers starting from address 40201 in a module, the host **sends** the following command:

| Module address | Function code | Register address | Read the number of | CRC verification |
|----------------|---------------|------------------|--------------------|------------------|
|                |               |                  | registers          |                  |
| 0x01           | 0x03          | 0x00C8           | 0x0003             | 2-byte CRC check |

#### The module **returns** the following data:

| Module address | Function code | Byte count | data             | CRC verification |  |
|----------------|---------------|------------|------------------|------------------|--|
| 0x01           | 0x03          | 0x06       | 0x0001 0023 0005 | 2-byte CRC check |  |

0x0001 represents the data of register 40201, 0x0023 represents the data of register 40202, and 0x0005 represents the data of register 40203 For the specific meaning of the data, please refer to the Modbus mapping table.

#### **04** Function code

Used for reading input registers

To read the status of the three registers starting from address 30101 in a module, the host **sends** the following command:

| Module address | Function code | Register address | Read the number of | CRC verification |
|----------------|---------------|------------------|--------------------|------------------|
|                |               |                  | registers          |                  |
| 0x01           | 0x04          | 0x0064           | 0x0003             | 2-byte CRC check |

#### The module **returns** the following data:

| <u> </u>       |               |            |                  |                  |  |  |
|----------------|---------------|------------|------------------|------------------|--|--|
| Module address | Function code | Byte count | data             | CRC verification |  |  |
| 0x01           | 0x04          | 0x06       | 0x0001 0023 0005 | 2-byte CRC check |  |  |

0x0001 is the data of register 30101, 0x0023 is the data of register 30102, and 0x0005 is the data of register 30103 For the specific meaning of the data, please refer to the Modbus mapping table.

### **05** Function code

Used for writing a single coil (DO)

To control the coil status of address 1 in a module, the host **sends** the following command:

| Module address | Function code | Coil address | Coil status       | CRC verification |
|----------------|---------------|--------------|-------------------|------------------|
| 0x01           | 0x05          | 0x0000       | 0xFF00 (set to 1) | 2-byte CRC check |
|                |               |              | 0x0000 (set to 0) |                  |

The module **returns** the same data as the **sent** content.

## **06** Function code

Used for writing and holding registers

If it is necessary to write register data with address 40201 to a module, the host sends the following command:

| Module address | Function code | Register address | data   | CRC verification |
|----------------|---------------|------------------|--------|------------------|
| 0x01           | 0x06          | 0x00C8           | 0x001C | 2-byte CRC check |

The module **returns** the same data as the **sent** content.

### 15 (0x0F) Function code

Used for writing multiple coils (DO)

To read the status of the 8 coils starting from address 1 of a module, the host **sends** the following command:

| Module address | Function code | Coil address | Number of coils | Byte count | data | CRC verification |
|----------------|---------------|--------------|-----------------|------------|------|------------------|
| 0x01           | 0x0F          | 0x0000       | 0x0008          | 0x01       | 0x0  | 2-byte CRC       |
|                |               |              |                 |            | 5    | check            |

The state of each coil corresponds to one bit of data, and 8 coils correspond exactly to one byte of data. If 9-16 are written in a single time. The number of bytes for each coil's data is 2, and so on. The binary representation of data 0x05 is 0000 0101, which represents DO0 and DO2 has a state of 1, while the remaining DO states are 0.

The module **returns** the following data:

| Module address | Function code | Coil address | Number of coils | CRC verification |
|----------------|---------------|--------------|-----------------|------------------|
| 0x01           | 0x0F          | 0x0000       | 0x0008          | 2-byte CRC check |

### 16 (0x10) Function code

Used to write multiple hold registers

If you need to read the data from two registers of a module starting from address 40201, the host **sends** the following command:

| Module address | Function code | Register address | Number of | Byte count | data           | CRC              |
|----------------|---------------|------------------|-----------|------------|----------------|------------------|
|                |               |                  | registers |            |                | verification     |
| 0x01           | 0x10          | 0x00C8           | 0x0002    | 0x04       | 0x0001<br>0023 | 2-byte CRC check |

The data of each register corresponds to 2 bytes of data, and the data of 2 registers is 4 bytes, and so on. 0x0001 is the data of register 4101, and 0x0023 is the data of register 4102.

## The module **returns** the following data:

| Module address | Function code | Register address | Number of registers | CRC verification |
|----------------|---------------|------------------|---------------------|------------------|
| 0x01           | 0x10          | 0x00C8           | 0x0002              | 2-byte CRC check |

M3000 Series Remote I/O Module Universal Function Modbus Mapping Table

| Address 4X | Function             | Explain   | Attribute  | Command        |
|------------|----------------------|---|------------|----------------|
| 40201      | 485 Address          | 1-255   | Read/Write | 0x03,0x06,0x10 |
| 40202      | Serial port settings | 0-3 bits: Baud rate [1] 4-5 bits: Checksum [2] 6-7 bits: Stop bit [3] | Read/Write | 0x03,0x06,0x10 |
| 40203      | Watchdog             | 0-255 0: Turn off the Watchdog 1-255: Set Watchdog Time (Units 100ms) | Read/Write | 0x03,0x06,0x10 |
| 40204      | Model                |   | Read       | 0x03           |
| 40205      | Version number       |   | Read       | 0x03           |
| 40206      | Serial number        |   | Read       | 0x03           |

[1]Baud rate comparison table

| Set value   | Baud rate |
|-------------|-----------|
| 0           | 1200      |
| 1           | 2400      |
| 2           | 4800      |
| 3 (Default) | 9600      |
| 4           | 19200     |
| 5           | 38400     |
| 6           | 57600     |
| 7           | 115200    |

[2]Checksum type comparison table

| Set value   | Parity |
|-------------|--------|
| 0           | NONE   |
| 1           | ODD    |
| 2 (Default) | EVEN   |

[3]Stop bit comparison table

| Set value   | Stop bit |
|-------------|----------|
| 0 (Default) | 1        |
| 1           | 2        |

Taking a baud rate of 9600, a stop bit of 2, and even parity as an example, the serial port setting value is 0x0063 (01100011).

## M300x Series Remote I/O Module Modbus Mapping Table

Analog output registers list

| Address 4X | Channel** | Function                               | Attribute  | Command        |
|------------|-----------|--|------------|----------------|
| 40001      | AO 0      | Analog output register *               | Write/Read | 0x03,0x06,0x10 |
| 40002      | AO 1      | Voltage output                         | Write/Read | 0x03,0x06,0x10 |
| 40003      | AO 2      | Range 0:0-4095 corresponds to 0-5V     | Write/Read | 0x03,0x06,0x10 |
| 40004      | AO 3      | Range 1:0-4095 corresponds to 0-10V    | Write/Read | 0x03,0x06,0x10 |
| 40005      | AO 4      | Current output                         | Write/Read | 0x03,0x06,0x10 |
| 40006      | AO 5      | Range 0:0-4095 corresponds to 0-20mA   | Write/Read | 0x03,0x06,0x10 |
| 40007      | AO 6      | Range 1:0-4095 corresponds to 4-20mA   | Write/Read | 0x03,0x06,0x10 |
| 40008      | AO 7      |  | Write/Read | 0x03,0x06,0x10 |
| 40101      | AO 0      | Analog output range selection register | Write/Read | 0x03,0x06,0x10 |
| 40102      | AO 1      | Voltage output                         | Write/Read | 0x03,0x06,0x10 |
| 40103      | AO 2      | 0: 0-5V                                | Write/Read | 0x03,0x06,0x10 |
| 40104      | AO 3      | 1: 0-10V                               | Write/Read | 0x03,0x06,0x10 |
| 40105      | AO 4      | Current output                         | Write/Read | 0x03,0x06,0x10 |
| 40106      | AO 5      | 0: 0-20mA                              | Write/Read | 0x03,0x06,0x10 |
| 40107      | AO 6      | 1: 4-20mA                              | Write/Read | 0x03,0x06,0x10 |
| 40108      | AO 7      |  | Write/Read | 0x03,0x06,0x10 |

<sup>\*</sup>Taking the 0-10V range as an example, the value that should be set for outputting 2V is (2/10) \* 4095=819

M30x2: AO 0 and AO 1 are valid, other channels are invalid;

M30x4: AO 0, AO 1, AO 2, AO 3 are valid, other channels are invalid;

M30x8: All channels are valid.

<sup>\*\*</sup>Different models have different numbers of output channels

# 6. After sales service and warranty

Smacq Technologies. Co., Ltd. promises that its products are under warranty. If the product malfunctions during normal use, we will provide free repair or replacement of parts for the user. For detailed warranty instructions, please refer to the warranty instructions inside the packaging box.

Except for the warranties mentioned in this manual and warranty instructions, our company does not provide any other express or implied warranties, including but not limited to any implied warranties regarding the merchant ability and fitness for a particular purpose of the product.

For more technical support and service details, or if you have any questions while using this product and this document, please feel free to contact us:

Phone: (86-10) 52482802 E-mail: service@smacq.com Website: http://www.smacq.com http://www.smacq.cn

# 7. Ordering information

## **Main Equipment**

| Model | Description  |  |
|-------|--|--|
| M3002 | 2-channel analog voltage output, 0-5V and 0-10V range    |  |
| M3004 | 4-channel analog voltage output, 0-5V and 0-10V range    |  |
| M3008 | 8-channel analog voltage output, 0-5V and 0-10V range    |  |
| M3012 | 2-channel analog current output, 0-20mA and 4-20mA range |  |
| M3014 | 4-channel analog current output, 0-20mA and 4-20mA range |  |
| M3018 | 8-channel analog current output, 0-20mA and 4-20mA range |  |

## **Standard Accessories**

| Model     | Description                                   |
|-----------|---|
| TB13-3.81 | Bolt terminal connector, 13 positions, 3.81mm |
| SDIN      | DIN-Rail mounting bracket                     |

# **8.** Document Revision History

| Date       | Edition | Remarks          |
|------------|---------|------------------|
| 2018.08.22 | Rev: A  | First release.   |
| 2024.07.10 | Rev: B  | Add some models. |
